

Curved Elegance

The new Union County Vocational and Technical School in South Plains, NJ posed an engineering challenge for the project's mechanical engineer, Birdsall Service Group of Eatontown, NJ. How would they provide for comfortable heating for the tall undulating wall of translucent glass in the building's entryway?

The design team at Birdsall called on Runtal's northern New Jersey representative, G & C Sales, and their stunning design collaboration using Runtal's field curved RF-3 panels is shown in the accompanying photos. Congratulations to them both for a beautiful solution to a challenging heating dilemma.
